

Assignment 8

Clustering Stocks

Applying PCA and K-Means Clustering to Identify Similar Stocks

Use the data on in the data directory sourced from Kaggle, to group together stocks.

- Choose the most recent period (e.g. ~December 2016) reporting and choose what data fields from the files to include.
- Take those fields/features and reduce them to some number of principle components by applying PCA.
 - Justify the number of dimensions you choose.
- Then use K-Means on your chosen Principle Components to cluster stocks together.
 - Justify the number of clusters chosen.
- Explain differences in clusters using EDA.
